

# Draw a quiver and compute

Click the canvas to add vertices, drag between vertices to add arrows, type relations, pick a field, choose what to compute. Everything is computed exactly by this app's own engine.

Preset — build your own —

Field CC

Clear

engine ready — quiverlab 0.1.0.dev0

Click empty space: add a vertex. Drag vertex → vertex: add an arrow (onto itself: a loop). Click: select. Double-click an arrow label: rename. Delete key: remove.

Relations  $a \cdot b, e^3$

☒ HH^0.. 10

☒ HH\_0.. 10

☒ Cartan matrix

☒ Coxeter polynomial

☒ gl.dim

☒ center

☒ worked-steps report

☒ Module (no code)

build  $I(v)$  injective

side right

injective at vertex 3

☒ dim vector

☒ rad/top/soc

☒  $\tau$

☒  $\tau^-$

☒ proj.dim

☒ inj.dim

☒ proj.res 0.. 10

☒ inj.res 0.. 10

☒ decompose

☒ Ext 0.. 4

☐ Tor 0.. 4

second argument N (Ext / Tor target)

build  $P(v)$  projective

side right

projective at vertex 2
