

Compute with quivers, exactly

Pick a family, a field, and invariants. No install needed. For heavier work, run `pip install quiverlab`.

 [Draw a quiver and compute →](#)

Family

TrivialExtension 

Parameters (JSON, e.g. {"n": 3})

{"q": 1}

Field

GF(2)

Invariants

- ☒ HH cohomology 0..6
- ☐ HH homology 0..6
- ☐ Coxeter polynomial
- ☐ Cartan matrix
- ☐ Global dimension
- ☐ Center
- ☐ worked-steps report

Compute
